Capsule Launches SmartLinx Medical Device Information System™ in Singapore

Singapore, 17 June 2014 - Capsule, the leading global provider of medical device integration solutions, today announced the introduction of its SmartLinx Medical Device Information System™ (MDIS) in the Asia-Pacific Market, the industry’s first MDIS.

With Capsule’s focus on patient-centered care, SmartLinx was developed to connect medical devices using multiple deployment options, with Electronic Medical Records (EMRs) and other information systems. Now SmartLinx MDIS, can also enable monitoring, management, and analysis of real-time patient data.

Through powerful surveillance tools and actionable information, SmartLinx enables predictive analytics that allows clinicians to recognize the signs of a patient’s physiological deterioration and take immediate action before the onset of adverse events, or even mortality. Operational analytics tools will assist IT and clinical engineering to easily manage and optimize the server, software and hardware components of the system.

Meet us at HIMSS Asia-Pacific 2014

Capsule will be presenting SmartLinx at the Healthcare Information and Management Systems Society (HIMSS) Asia Pacific 2014 in September in Singapore. The suite of products in the SmartLinx portfolio provides the ability to connect, monitor, analyze and act via:

- Embedded applications for continuous and periodic data collection
- Operational analytics to optimize the MDIS
- Hardware or software only connectivity solution
- Web based tool to manage the server, software and hardware components

Attendees can expect to experience smarter device connectivity as well as product demonstrations at Capsule’s Booth #509.

About Capsule

Capsule is the leading global provider of medical device integration solutions for hospitals and healthcare organizations. Capsule’s SmartLinx Medical Device Information System (MDIS) increases efficiency and improves patient care through the systematic real-time capture of patient vitals at the point-of-care and the delivery of those data to hospital electronic medical records, other information systems and third party mobile solutions. Powerful clinical surveillance and analytical software tools enable alerts and alerts to clinicians of adverse patient conditions, allowing timely patient interventions. Capsule’s solutions are flexible and scalable, offering a variety of deployment options to meet the needs of any healthcare delivery organization. Founded in 1997, the Company has established strong partnerships with leading medical device manufacturers and installed enterprise-wide solutions in over 1700 hospitals in 37 countries.
